

Spatial Stories IP1 to IP2a Iteration

设计迭代对照 | Zixu Yang 48939559 | 22 September 2026

The revision retains the floating album, direct manipulation, separate T/S spheres and a spatial bin. IP2a tests whether clearer feedback supports independent use with Quest controllers.

本次保留悬浮相册、直接操控、独立 T/S 球和空间垃圾桶。IP2a 检查改进后的反馈能否支持用户用 Quest 控制器独立操作。

IP1 baseline: 5 participants; 4/5 full completion; 0/5 prompt-free; ease ≈4.8/5; naturalness ≈4.1/5.

IP1 基线：5 人，4/5 完整完成，0/5 无提示完成；易用性约 4.8/5，自然度约 4.1/5。

IP1 evidence 原有证据	IP2a response 本次修改	Observe in IP2a 本次观察
All five needed prompts; instructions needed prominence. 五人均需提示；提示视觉不突出。	Stage guidance and clearer selection feedback. 阶段提示及更明确的选中反馈。	S01 to S08 prompts and hesitation. 八步骤提示位置及犹豫。
One participant described floating as intuitive and rotation as useful. 一位参与者认可悬浮与旋转。	Retain floating photo cards and controller manipulation. 保留悬浮卡片与控制器操控。	S04 to S06 and reach/comfort. 移动、旋转、缩放及舒适度。
Red associated with deletion; Publish appeared early. 红色被理解为删除；发布过早。	Red bin feedback; blue Publish after editing, with review and confirmation. 垃圾桶红色反馈；编辑后蓝色发布，并有预览确认。	S07/S08 errors, hesitations and premature publication attempts. 删除／发布误操作及提前发布尝试。
Sticker availability and selection states unclear. 贴纸可见性及选择状态不够清晰。	Labelled T/S spheres, sticker previews and staged editing. T/S 名称、贴纸预览与分阶段编辑。	S02/S03 first choices; what each tool means. 工具初次选择及含义理解。

Evidence strength: these IP1 comments motivate hypotheses. They do not establish that the revised controls already work well for new users.

证据强度：这些 IP1 意见用于形成改进假设，不能证明新参与者已经能顺利使用。

Recovery and new XR questions 恢复与新增问题

Source 依据	Design response 设计回应	Evaluation 评估方式
IP1 notes requested deselection/back. IP1 记录提出取消选择或返回。	Back to album with edits retained. 返回相册并保留对应照片编辑。	Optional O1: return and revisit. 额外 O1：返回后重选。
Recovery is a new design extension. 恢复属于本次新增设计。	Undo for the most recent deletion; default about five seconds. 最近一次删除可撤销，默认约五秒。	Optional O2: immediate recovery after a separate deletion. 额外 O2：另一次删除后立即恢复。
Desktop IP1 did not test real controller handling. 电脑 IP1 未测试真实控制器。	Quest Trigger/Grip and two-controller resizing. Quest 按键、抓取及双手缩放。	Observe mis-grabs, loss of control, reach and comfort. 记录误抓、失控、可达性和舒适度。
Virtual text entry is new. 虚拟键盘是新增功能。	Short typed captions or preset phrases. 可输入短文字或选预设。	Record input method; do not infer keyboard usability from preset-only use. 记录输入方式，不能用预设成功证明 键盘好用。

Brief explanation to the tutor 向老师简述

In IP1, four out of five participants finished, but everyone needed help. I retained the floating photo wall, text and sticker spheres, and spatial bin. I improved the guidance, selection feedback and publish sequence. This test checks whether peers can complete the workflow independently with Quest controllers, and where reach, manipulation or recovery still causes difficulty.

IP1 中五人有四人完成，但所有人都需要提示。我保留了悬浮照片墙、文字与贴纸球和空间垃圾桶，改进了引导、选择反馈及发布流程。本次检验同学能否使用 Quest 控制器独立完成，以及可达性、操控和恢复在哪些地方仍有困难。

Limits and source trail 限制与证据来源

Use IP1 as context rather than a controlled comparison: hardware, practice, tasks and participants can differ. Barehand tracking, passthrough and Instagram upload remain outside this test.

IP1 用作背景参考，设备、练习、任务和参与者可能不同，不能当成控制实验。此次不验证裸手追踪、透视或真实上传。
